## WHAT IS HYDROSEEDING?

Hydroseeding is the quickest and most effective way to establish a new lawn from seed. The process is fast, efficient, and economical. This grass planting process is usually more effective than conventional seeding and certainly more economical than conventional sodding.

### The Results

Warm and moist conditions promote faster seed germination. Seed bed conditions determine growth rates after germination. When all the conditions are favorable, grass may require mowing and have excellent coverage in three to four weeks. It may be possible, under the most ideal conditions, to produce a turf suitable for a football field which can be ready for play in 90 days. During less favorable circumstances, a good stand of grass can take many months, or even up to a year, to become established.

## LANDSCAPING

### From Design to Long Term Care

- **Landscape Design**  
*Working with customers to achieve their goals and dreams*
- **Landscape Maintenance**  
*Shredded Bark  
Wood Chips  
Weed Control  
Pruning*
- **Lawn Care**  
*Scheduled Mowing Programs  
String Trimming  
Blowing Off Walkways & Driveways  
Fertilization Programs*

CJM uses only the highest quality plants and materials that are available, which gives you a beautiful, long lasting landscape.

## LANDSCAPE INSTALLATION
